

# OLLIE THE OCEAN OYSTER

By: Joseph & Jocelyn

One day, Ollie the oyster got home from school, mama and papa oyster were sick. They told Ollie that Dr. Dolphin said they weren't going to make it, they were contaminated by the chemicals of the river. No one knows where the chemicals come from, no one dares to go near them. Ollie was so sad, he started swimming away from home to his favorite spot. Then a beautiful goldfish appeared, "Why are you crying?" asked the goldfish. "Mama and papa oyster have been contaminated by the chemicals in the river, and they won't make it." said Ollie. "Do you want to stop the chemicals from the river?" asked the goldfish. "Yes, but how, I don't want to become contaminated?" asked Ollie. "Follow me!" said the goldfish. Ollie followed the beautiful goldfish. "Pick one of these three items." said the goldfish. There was a golden coin for Ollie to become rich, a nice big pearl so that Ollie can show it off, and a plain old rock. Ollie looked at all three items, and he chose the rock. "A rock? Why would you choose that old rock

Ollie?" asked the goldfish. "I chose this rock because mama and papa like collecting rocks." answered Ollie. "You passed! This was a test Ollie, and you passed it. The rock actually gives you superpowers!" said the goldfish. Ollie grew a body, and felt super. "You must go stop the chemicals!" said the goldfish. "You still haven't told me your name?!" said Ollie. "I am Goldie, the protector of the super rock, and now your Mentor." she said. "Well, what superpowers do I have?" asked Ollie. "You can fly, duplicate yourself, sonic scream, shoot pearls from your mouth, and talk to humans. Now we must be on our way!" said Goldie.

Ollie swam to the river where there are chemicals. "These little chemicals aren't so bad, I'll just sonic scream them all away." said Ollie. The small chemicals got together and created bigger chemicals. "Uh-oh, spoke too soon." said Ollie. Ollie used his pearl shooting powers and hit the chemicals. Ollie punched the chemicals, until One chemical said "You can't stop us, the factory will keep on dumping more and more chemicals in the water, and people will keep throwing trash in the water.". Ollie needs help to get the factory to stop. Ollie goes to the beach and sees some kids. "Hello! my name is Ollie the Oyster, and I need your help to stop the factory from dumping chemicals inside the water." said Ollie. "Are chemicals bad?" asked one kid. "Chemicals can contaminate the water you drink everyday at your house and make you or someone in your family sick." said Ollie. Ollie and the kids went to the factory and they asked the Owner of the factory to stop dumping chemicals in the water. The Owner said no! So the kids decided to try and turn off the factory themselves, but security caught them and locked them up. It was up to Ollie to save them. Ollie yelled "Duplicate!" and he duplicated other oysters. The oysters bit the security and factory workers, and saved the kids Ollie also saw a big red button that would shut down the factory. Ollie pressed it, and went back home. But there were still chemicals.

"Where are you chemicals coming from, I shut down the factory?" asked Ollie. "You might have stopped the factory but people still throw trash in the water!" said one Chemical. Ollie goes back to the Beach. "Friends the chemicals are still in the water all you have to is clean up the beach and rivers because fish can get stuck in the trash and the chemicals can live there." said Ollie. Ollie wants your help, you don't have to shut down a factory, you can just clean your rivers and beaches. You can pick up trash in your area before it ends up in the Ocean. You can also help by recycling, reusing things that can still be used like a plastic bottle or a glass jar that isn't broken. Ollie is still fighting the chemicals as a superhero, but you can be a superhero by helping him.
